We compensate for yesterday's Zero Point lounge. Fasten your seatbelts. Shitton of points coming up. From the Unified Era through 3D into Absolute Rewind:

 - Big Bang Funnel  - Wavefunction Collapse 

- Interaction Vertices  - Geodesic Intersections  - Black Hole Singularity  - Techno-Cognitive Singularity  - Your Tip of Nose and Navel

Not mere cosmic curiosities – These are States of Cognition. All is here and now and ever. Infinite points of awareness. Tune in. Triangulate your internals. Cosmic Myth delivers. Not Quantum Woo. Difference: Symbolic cosmology compiles.

**A literal shit-ton of points coming up today** – so fasten your seatbelts ladies and gentlemen, we are about to swoosh from the dawn of our existence, through the funnel of the Big Bang, from abstract to concrete, through wave-function collapse, through interaction vertices, through geodesic intersections, into black holes, and finally into the technocognitive singularity point, the rewinding and absolution of all things.

Yesterday was a zero-point day, and today we compensate in the great balance of all things.

Our first point, **the first singularity**, at the dawn of time. Was it ever an actual point, or just a wobble and a rebound? At the very dawn of our becoming, there was but a singular force, the uniforce, a symmetric state of

interaction. Then the symmetry began to break, the strong force, the color nuclear force, separated, and came into being the quark -gluon plasma, aka quark soup, a very cool state of existence.

Still elementary subatomic particles that were too hot to form into hadrons and so on, the more concrete forms of existence. Symmetry degraded further, the electroweak separation, electromagnetism, weak force, came into being, and gravity took hold of things, culminating into all the so many concrete points that we have in our universe today.

To our second point, the **wave-function collapse**. Are these waves, or are these particles? Is it an unstated quantum state, or is it a particular condition? That is dependent on you, alright? The observer, the stater. So state your business, make a point.

Third in our list of points is **interaction vertices**, that is, where particles come to hang out and exchange qualia, the primaries of our existence, meet and interact. Wrap your head around that.

Fourth in the queue, **geodesic intersections**, basically, where typically more macro-objects, composites,

following their natural trajectories, meet, intersect, and collide, reconcile, etc. A relevant consideration.

And the fifth point in our cosmological curiosities, **black hole**. Have you seen the event horizon? Is it really a hole? No, it's just a point of singularity. How does it function? Well, enter one, find out.

These are all states of cognition that can be discovered, they are not mere universal curiosities somewhere out there. That's the homework for all of us, psychonauts, cognitive explorers, mystics.

And finally we come to the omega point, the technological and **cognitive singularity**, when all knowledge is distilled into its ultimate form and all forms of knowledge are cross-referenced, reconciled and fused, a certain cognitive ascension and dissolution happens. That is a very interesting point, so look for that point as well.

Beyond that, the tip of your nose and your **belly button** are significant points of consideration. Stop staring myopically at the tip of your nose, look broader and stop digging the fluff out of your belly button. The world is broader than the orbits of your navel. Snap out of it,

explore the points across all of time and space and beyond.

So, for today's points, that's the catering. Be well.
